Hiring Team, YipitData, Remote, India

Subject: Application for Senior SDET (India Remote)

Dear Hiring Team,

I am excited to apply for the Senior SDET role at YipitData. With [X] years in quality assurance and software testing, including [X] years focused on test automation, I have built and evolved test strategies for large, complex releases in fast-moving environments. YipitData's emphasis on ownership, speed, and data you can trust is exactly the kind of environment where I do my best work.

In my current role at [Company], I [lead / own] quality for [product or platform], where I design test plans spanning manual, automated, and performance testing. I have built and maintained automation frameworks using [Selenium / Robot Framework / Pytest] in [Python / Java], and I am comfortable writing clean, maintainable test code. For example, I [describe a specific achievement, e.g., reduced regression time from 2 days to 3 hours by automating 400+ test cases and integrating them into CI].

Several parts of your requirements match my experience closely:

API and performance testing: I have tested REST services extensively with [Postman / REST Assured] and run load and stress tests using [JMeter / Gatling], identifying bottlenecks in backend features before release.

Data and systems skills: I am comfortable with SQL for validating data, working in Linux environments, and using [Docker] for reproducible test setups, which is especially relevant for a data-driven company like YipitData.

Test strategy and collaboration: I have defined test strategies, tracked defects through to resolution, and worked closely with developers, product owners, and other teams in Agile sprints to keep releases on schedule.

Beyond standard UI and API automation, I enjoy building internal QA tools. [Optional: mention a tool, script, or service you built, e.g., a Python utility for automated data validation or test-data generation.] I also like exploring new testing approaches and tools to improve both efficiency and quality.

I work well independently, communicate clearly across teams, and thrive when given high expectations and real ownership. I would welcome the chance to discuss how I can help YipitData raise the quality bar for its products and data. I am available to work the 8 am to 5 pm IST schedule.

Thank you for your time and consideration.

Sincerely,

Nagaraj Lakshatti
