Hiring Manager
[Company Name]

Subject: Application for [Job Title] (Remote)

Dear Hiring Manager,

I am writing to apply for the [Job Title] position at [Company Name]. I am a Lead SDET with over 10 years of experience building test automation frameworks and leading quality engineering for customer-facing platforms across healthcare, sports, banking, and fintech. I am looking for a remote role and am available to join immediately.

In my most recent role at NTT DATA, I owned the end-to-end automation strategy for clients including University Hospitals of Leicester NHS Trust, Arsenal Football Club, and Wells Fargo. I built scalable frameworks in Java and TypeScript using Selenium, Appium, WebDriverIO, Cucumber, and Rest Assured, and integrated them into Jenkins and GitHub Actions pipelines. This work reduced manual testing effort by 60–70%. I also introduced AI-assisted development with GitHub Copilot, Claude Code, and Devin AI, cutting manual coding effort by about 30%.

Earlier, as automation lead for Western Union at Altimetrik, I architected hybrid frameworks and Jenkins pipelines for parallel execution and validated mission-critical money-transfer flows. Across my career I have tested Web, Mobile (Android and iOS), API, and Performance layers, using tools such as Apache JMeter and BrowserStack.

I also enjoy leading teams. I mentor QA engineers and work closely with Product, Engineering, and DevOps to shape release and risk decisions. I am comfortable with remote collaboration and clear written communication with distributed teams, and I can work with your team across time zones.

I would welcome the chance to discuss how my experience can support [Company Name]’s quality goals. Thank you for your time and consideration.

Sincerely,
Nagaraj Lakshatti
